

Press release

Justus von Liebig helped LUM grow, and now things are moving forward with optimism.

LUM GmbH relocates its global headquarters in Berlin-Adlershof.

Berlin, 13 August 2025:

LUM GmbH is one of the world's leading providers of analytical instrumentation solutions in the fields of particle characterization, direct and accelerated dispersion stability testing, material testing by centrifugal adhesion testing, and product parameter determination. As part of its strategy for further development, LUM GmbH is now relocating its headquarters from Justus-von-Liebig-Strasse 3 to Wagner-Régeny-Strasse 16, 12489 Berlin-Adlershof. Susanne Lerche-Merchant, CEO of LUM GmbH, said: "After 13 years at Justus-von Liebig-Strasse, where we were able to continue growing in the spirit of the renowned chemist [1], we would like to thank all partners who made this possible. We were able to further expand our portfolio of customer solutions, but have now reached spatial limitations.

At our new location at Wagner-Régeny-Straße 16, deliberately remaining within the Berlin-Adlershof Science and Technology Park, we have moved into a completely renovated and state-of-the-art space of approximately 1320 square meters. This creates the ideal conditions for continuing the company's continued development. The significant expansion of our production, logistics, and service areas enables more efficient production of both our latest LUM product, LUMiSpoc® - Single Particle Optical Counting & Sizing – and the new analytical device that will be introduced shortly this autumn. For the existing product lines LUMiSizer®, LUMiFuge®, and the LUMiReader® family, production conditions are improved, and maintenance processes are simplified.

In the application area, capacities will be significantly expanded with several fully equipped exhibition and event rooms to meet the increased demand for continuing education, contract analytics, and personalized, global customer support.

Let us be inspired by Rudolf Wagner-Régeny, composer, university professor [2], and namesake of the street, and his music, to move forward with enthusiasm into the future of LUM GmbH."
